EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

2. Authorization for this examiner's amendment was given in a telephone interview with James Clingan on 5/11/2006. For clarity, the various "an output" are going to be specified as to what output each one is since James Clingan acknowledged that there would be a misunderstanding if the output in claim 2 is output of the chip rate baseband processor. James Clingan said that he does not have a problem with making amendments that clarify the output. For line 10, James Clingan currently believes that "first" should be changed to 'pilot'. Accordingly, the application has been amended as follows:

In the claims:

Claim 1:

Line 7: "an output" has been changed to ---a pilot multiplier output---

Line 9: "an output" has been changed to ---a data multiplier output---

Line 10: "first" has been changed to ---pilot---

Line 11: "an output" has been changed to ---a pilot correlator output---

Line 17: "an output" has been changed to ---a load controller output---

Line 20: "an output" has been changed to ---a phase rotator output---

Claim 2:

Line 2: "an output coupled" has been changed to ---an output of the cluster

tracker coupled---

Remarks: The above amendments have been made for clarity.

3. The following is an examiner's statement of reasons for allowance: The art of record does not suggest the respective claim combinations together and nor would the respective claim combinations be obvious with: a peak detector coupled to the pilot memory; a data accumulator coupled to the data multiplier; load controller having a first input coupled to the peak detector, a second input coupled to data accumulator, and an output; a data memory coupled to the load controller; a phase rotator having a first input coupled to the channel estimator, a second input coupled to the data memory, and an output; and a symbol combiner having an input coupled to the phase rotator, and an output which provides the symbol output.

4. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
